

- e. Three-inch thick rigid foamglass insulation (with wet paper facers).
- f. Approximately 3-inch thick layer (tapered) All-Weather Crete asphalt/perlite fill (wet).
- g. Concrete roof slab.

Figure 2.6-26 Inspection Opening No. 7

As shown in Figure 2.6-26, the existing construction on the west side of this opening generally consists of the following (from top to bottom):

- a. Two-ply granular surfaced modified bitumen membrane (set in cold adhesive).
- b. Approximately four layers of elastomeric coating (includes base, intermediate, and several finish coats).
- c. Approximately 1-1/4-inch thick layer of composite bitumen-aggregate fill.
