

NNA10SBFC-EMS  
Questions and Answers, Set 1  
June 8, 2010

Q.1. Can potential vendors take some photos of the site where the solution will go?

A.1. Yes, vendors may visit the site and take photos, however NASA will need notification from the vendor prior to their arrival in order to coordinate with the construction crew and arrange for an escort.

Q.2. Is NASA paying/doing installation separately or will the vendor need to provide?

A.2. NASA will provide the utilities connections to the fuel cell location--that will include natural gas, electrical conduits for power and communications, and water. The fuel cell vendor will be responsible for installing the concrete pad, fuel cell, metering, and making the final connections at the fuel cell.
