

GENERAL

QUESTION 1: We request a one week extension of the USGCRP NCO proposal due date. NASA's responses to questions yesterday significantly affect multiple sections of the response including technical approach, phase-in plan and pricing for the IT portions of the statement of work. This includes gathering pricing information on various equipment and software options to allow for the most effective solution for NASA.

ANSWER: The government has considered this request for an extension and will not extend the due date for proposal submission. The answers to questions posted on October 24, 2014, did not change in any major way the information that has been available to potential offerors since the draft RFP was posted on August 19, 2014.
